PROJECTS

Distributed Log Analytics Platform
Built a scalable log analytics system to ingest, parse, and index large-scale application logs for real-time monitoring. Implemented log processing using Python/Java with ElasticSearch and integrated ML-based anomaly detection to identify abnormal system events.

Real-Time Code Quality Analyzer
Developed a tool to analyze GitHub repositories and detect code smells using AST parsing and rule-based analysis. Implemented automated code quality scoring with ML-based classification and a web interface for real-time feedback.

Campus Placement Analytics System | Full-Stack + ML
Built a full-stack analytics platform to track placement trends and predict student offer probability using machine learning models. Developed dashboards using Flask/Spring backend, React frontend, and MySQL for data visualization and insights.
